

Singapore EXPO Sustainability Commitment

Singapore EXPO aims to be Asia's most sustainable events venue, powered by renewable energy—progressing the MICE industry while reducing environmental impact and creating positive social outcomes. Operated by Constellar Venues, we embed sustainability into how we design, operate and host events with clients, suppliers and the community. Our commitment is aligned with Singapore's national climate ambitions:

- Net Zero by 2050; 75% reduction in Scope 1 & 2 emissions by 2030
- Signatory to the Net Zero Carbon Events (NZCE) initiative
- Measure and report Scope 1, 2 and 3 emissions with transparent progress updates

Singapore EXPO drives decarbonisation through clean energy and efficient operations, including one of Singapore's largest single-site solar PV system and ongoing efficiency upgrades (lighting, chillers, fans and controls). We also apply smart defaults such as reduced lighting, no air-conditioning during setup/teardown and enforce a no-idling policy for vehicles. Event organisers may request utilities data and event-level carbon footprint reports to support sustainability disclosures.

We advance circularity through a venue-wide waste programme aligned with Sustainable MICE guidelines, with recycling stations and on-site tracking. Food waste is processed via an on-site digester, and single-use plastics and polystyrene food packaging have been eliminated in favour of reusable or lower-impact alternatives.

To support Singapore's "30 by 30" food resilience goal, we promote sustainable food choices, including on-site urban farming and locally-sourced, responsibly-produced ingredients. Our people and community commitments focus on fair and inclusive employment, staff well-being and learning, plus youth empowerment through partnerships with institutes of higher learning.

We work with suppliers that share our standards on ethical sourcing, fair labour practices and environmental responsibility, and we publish annual sustainability reports with greenhouse gas accounting and continuous improvement.
